Case Study: AI Google Voice Dispatch Agent

Muhammad Afzal Kalwar | @mafzalkalwardev | Problem -> Stack -> Result

Problem

Dispatch and outbound sales teams needed a low-cost way to run Google Voice calling workflows with scripts, voicemail handling, and operator control - without buying an expensive dialer stack.

Stack

Python, Selenium, FastAPI, Groq LLM, local TTS, operator console UI, CRM-style call logging.

Result

Shipped a production-ready outbound assistant that generates call scripts, drives Google Voice in the browser, handles voicemail paths, and gives operators a live console - reducing manual dialing friction for logistics/dispatch use cases.

Audience

Dispatch teams, logistics ops, and outbound sales agencies.
